

Wilson Mohr can design and build ETL or UL-certified panels, customized to meet your requirements for various applications and industries. We can rebuild your existing panels to comply with today's standards while incorporating desired modifications. We can also build control panels based on your engineered drawings or bill of materials. Wilson Mohr tests all panels before they leave our warehouse to ensure a successful job site startup.

Wilson Mohr provides professional CAD and Application engineering services to our contractors. Our services range from panel design, submittal generation, point layout and wiring diagrams, to sequence of operation generation. These services allow our contractors to not only focus on their core competencies, but reduces their employee downtime in slow seasons.

Wilson Mohr provides training for a wide array of vendors products and control systems. Honeywell and Alerton both offer certification courses in development and operation of building automation control systems. We can provide access to this training either at the manufacturer's facility, locally at one of our facilities or even at your location. Visit our website for more information and to view our training schedule, www.wilsonmohr.com.
